Detectamark Permanent Marker

ILLBYPLAST
plast - muovi - plastics

The body and cap of our Detectamark Permanent Marker are moulded from high-density polyethylene, containing a non-toxic metal detectable additive. This compound can be detected by correctly calibrated in-line metal detection systems.

The Detectamark features Sureflow ink, meaning the pen will continue to write for several days, even if the cap is left off. This alcohol-based ink will permanently mark most surfaces, including wood, plastic, glass, concrete, and clean or printed metals.

Available in blue, black, red, and green ink in bullet nib with a multi coloured pack also available. Blue and black ink are available in the fine tip nib.

Delivery 10 pcs

Article No	PM-B
Size	145x16mm
Weight	0,23
Material	Metaldetectable plastics
Detectable	Yes
Color	Blue, black, red, green
Packaging unit	10 pcs
GS-Certificate	FDA, EU, Kosher Certified, Halal Certified 2020
EAN	PM-B
